DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 1-3 are rejected under 35 U.S.C. 102(a) as being unpatentable by US Patent 5,986,640 to Baldwin et al.

In reference to claim 1, Baldwin teaches a method of displaying an image where the image frame period is divided in to two (column 6, line 59) and shy then some of the bit data are displayed in some, if not all, of the refresh and other bits are displayed more of the refresh period (figures 6a-6e and column 6, lines 58-62).

In reference to claim 2, in addition to the rejection offered in the discussion of claim 1, Baldwin also teaches that these the display periods are allocated to prevent flicker of the image data bit display by the method described in rejection of claim 1 (column 7, lines 19-25 and lines 34-47).

In reference to claim 3, Baldwin teaches a controlling circuit (item 119) that receives the video signal and determines the amount of time the light should be modulated on the mirror devices (column 4, lines 1-15).
